

Canary deployment with Istio and Kubernetes On DigitalOcean

Mamta Jha
(Sr.Developer Advocate @ DigitalOcean)

 Whoami - Mamta Jha

Senior Developer Advocate - Review architecture of DigitalOcean customers and suggest best practices that could be applicable.

Head of DevOps - Architecting cloud strategy for enterprises which included latest cloud technologies like AWS, GCP, Ansible, Docker, Kubernetes and OpenShift. A Red Hat Certified Instructor who delivered trainings on several Cloud and DevOps courses.

Software Developer - C, C++, worked on layer 2 and layer 3 protocol stack development. Worked on Cloud Security for Cloud RNC.

Senior Tech Specialist- Worked on first ever Cloud RNC (WCE – Wireless Cloud Element) which used VMware products like VM manager, vCenter, ESXi and vSphere 5.5 products. Deployed & managed OpenStack infrastructure primarily on Red Hat.

Agenda:

- Understand Canary Deployment
- Basics of Istio service mesh and Helm
- Deploy app on managed Kubernetes service of DigitalOcean
- Canary release a Node.js app

Agenda

Canary Deployment

K8s Cluster

Helm Installation

Istio Installation

Deployment Strategy : Canary Release

How Do We Do Canary Deployments?

- Using Load balancers and Auto Scaling groups
- Kubernetes cluster:
 - Using Labels and Deployments
 - Using Istio service mesh

Canary Deployment

K8s Cluster

Helm Installation

Istio Installation

DIGITALOCEAN KUBERNETES

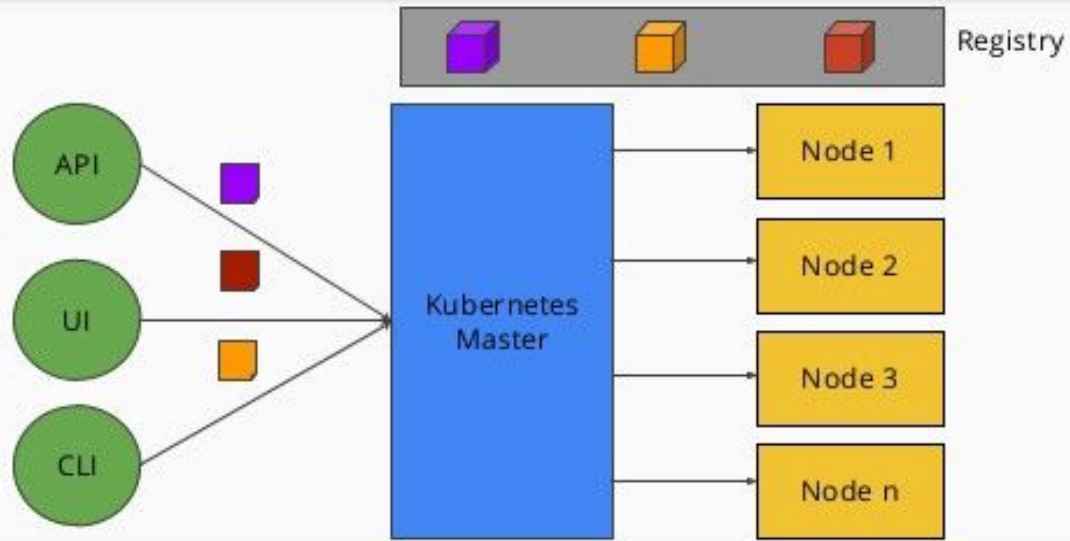

Kubernetes in minutes

Managed Kubernetes designed for simple and cost effective container orchestration.

Kubernetes Architecture

Canary Deployment

K8s Cluster

Helm Installation

Istio Installation

What is Helm?

- Package manager for Kubernetes
 - Like apt, yum
- Makes app deployment easy
- Provides ease in managing apps

Helm components

- Helm Client
 - Command line interface
 - Development of charts
 - Interaction with Tiller server
- Tiller server
 - Interacts with Helm client and Kubernetes API server
 - Manages lifecycle

How To Do Canary Deployments With Istio and Kubernetes
© 3.2k  0 By Kathleen Juell

27 days ago

Install Helm

<https://www.digitalocean.com/community/tutorials/how-to-install-software-on-kubernetes-clusters-with-the-helm-package-manager>

Canary Deployment

K8s Cluster

Helm Installation

Istio Installation

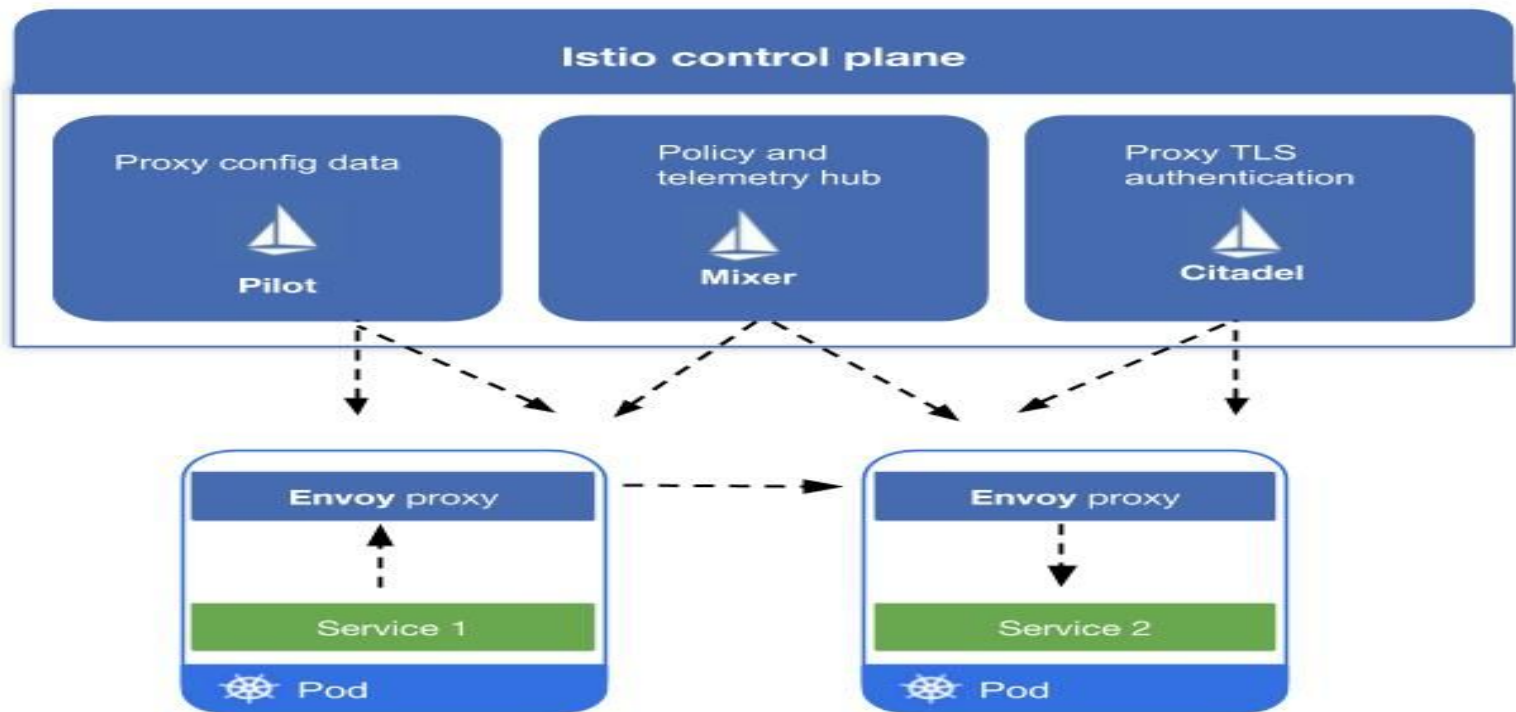

Istio

- Service mesh providing for microservices platform
- Traffic management
- Create a network of deployed services with load balancing, service-to-service authentication, monitoring and much more

Istio Architecture

Advantages of Istio

- Service discovery
- Load balancing
- Traffic routing and control

Traffic Management with Istio

- Istio's traffic management model relies on the following two components:
 - Pilot : The core traffic management component.
 - Envoy proxies: which enforce configurations and policies set through Pilot.

Traffic Management API resources

- Virtual services
- Destination rules
- Gateway
- Sidecar container
